

Job offer ref. # 11-19007

The Senckenberg Gesellschaft für Naturforschung (SGN) is a member of the Leibniz Association and is based in Frankfurt am Main, Germany. SGN conducts natural history research with almost 800 employees and research institutions in six federal states. Within SGN, the Senckenberg Biodiversity and Climate Research Centre (SBIK-F) explores the interactions between biodiversity, climate, and society.

Senckenberg BiK-F invites applications for a

Post-Doc position (m/f/d) **Human-carnivore coexistence across borders** (full time)

The transfer of evidence-based information to society is essential for human-carnivore coexistence, because knowledge is a key factor in conservation debates.

In the context of the project “Transfer of evidence-based and co-produced Knowledge for Human-Wolf Coexistence – KnowWolf”, funded by the Leibniz Association, we plan to tackle three challenges in science communication to society: i) media literacy, ii) science literacy and iii) emotional barriers. The aim of the postdoctoral position is to overcome these barriers by developing models of social-ecological sustainability that will be implemented in a modular tablet application as an innovative, immersive and adaptive interface between science and society, focused on human-wolf coexistence.

In collaboration with a diverse team of scientists and communication experts of the KnowWolf project, the candidate will actively contribute to the design, the development and the implementation of the Digital Transfer Tool (DTT), by i) designing social surveys targeting the broad public, ii) developing choice experiments related to wolf management and iii) developing models of social-ecological suitability in different human-wolf coexistence contexts. With data collected during the project, the candidate will examine questions related to public perceptions and emotions towards wolves in different contexts of coexistence, identify potential drivers of human-wolf coexistence, and evaluate the importance of knowledge transfer focused on the wolf topic.

Your tasks:

- Contribute to KnowWolf project management: strategic planning, meetings, promotion, implementation, reporting
- Collaborate with the KnowWolf team to design choice experiments related to wolf management
- Develop adaptive social-ecological models of suitability for human-wolf coexistence in different contexts (i.e. within and outside Europe)
- Cooperate with a Digital Agency to implement the social-ecological models, choice experiments and games in the DTT
- Analyse results of the social surveys across contexts of coexistence and evaluate the performance of the knowledge transfer in relation to the adaptive information content
- Publish research results in international journals in cooperation with the project team

Your profile:

- A PhD degree in ecology, conservation science, interdisciplinary environmental science, environmental management, sustainability, social ecology, or another relevant field
- Management skills with ability to coordinate a team of collaborators with diverse backgrounds, and ability to work independently as well as in an interdisciplinary environment
- Statistical skills (experience with designing statistical models in R) are required.
- Experience in developing or applying social-ecological models, population models, choice experiments is advantageous
- Interest in knowledge transfer to broad public on the topic of carnivore conservation and human-wildlife conflicts
- Familiarity with Shiny R, JavaScript or equivalent tools for designing web applications of statistical analyses is a plus
- Excellent publication record
- Excellent English and good German language skills

What is awaiting you?

- An interesting task in a dynamic team of researchers in an international research group
- The possibility to build and extend your network with scientists at an international level and to attend national and international conferences
- Flexible working hours – annual special payment – company pension scheme – Senckenberg ID card for free entry in museums in Frankfurt

Salary and benefits are according to a full time public service position in Germany (TV-H E 13, 100 %). The position is a 2-year fixed-term post (with a possible extension of another year), starting as soon as possible.

This project takes place in the group of Prof. Dr. Thomas Müller (thomas.mueller@senckenberg.de).

The Senckenberg Biodiversity and Climate Research Centre supports equal opportunity of men and women and therefore strongly invites women to apply. Equally qualified handicapped applicants will be given preference. The place of work is in Frankfurt am Main at the Senckenberg Biodiversity and Climate Research Centre (SBiK-F). The employer is the Senckenberg Gesellschaft für Naturforschung.

Please send your application, mentioning the reference of this job offer (**ref. #11-19007**) by **June 2nd, 2019 (deadline)** by e-mail (**attachment in a single pdf document**) and including a cover letter describing your motivation to apply, a detailed CV, relevant credentials and certificates, two relevant publications, and contact details of two potential references to:

Senckenberg Gesellschaft für Naturforschung
Senckenberganlage 25
60325 Frankfurt am Main
